

Soltaire Network

Solaire Network is a decentralized super app that aims to build an all in one platform for users to access the various crypto platforms in a single app.

ABOUT THE TEAM

We've been in the blockchain space since as early as 2013 – growing, investing, contributing, developing, and building along with it.

We believe in the future of this technology and that it is here to stay and grow exponentially through time.

Solaire's team members consists of marketers, executioners, visionaries and developers alike.

Solaire aims to build a decentralized super app encompassing various crypto platforms in one single application for users.

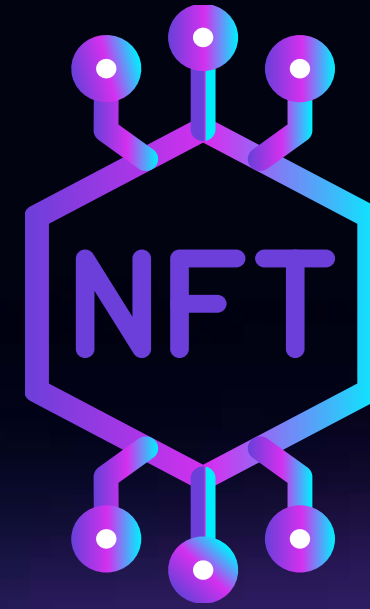

Our hope is for users to do their onchain activity through our app, it might help them be more efficient should they get more proficient at using our app.

ABOUT THE PROJECT

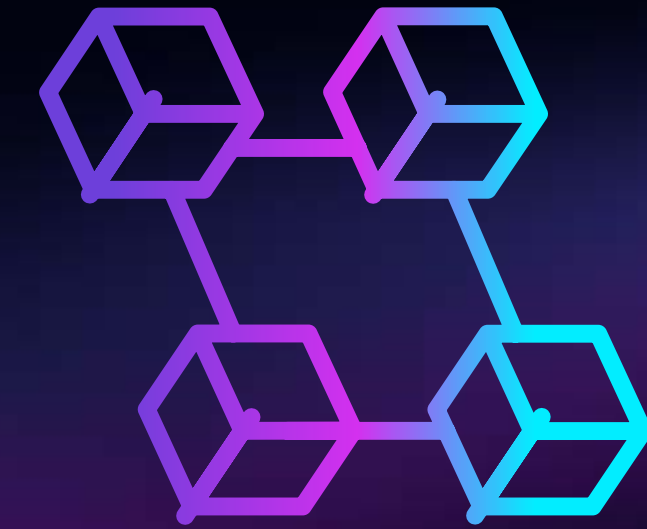

NFTs

Solaire will make it easier for users from beginners to experts in the crypto space to access, understand and use NFT technologies all in one platform and mobile app.

NFT Subscription Platform

Solaire aims to develop a feature similar to OnlyFans. It is intended to allow creators to connect with their fans/users through NFT Technologies.

Governance

Solaire aims to create a governance model where stakers will be able to vote on future decisions regarding the network through improvement proposals.

HOW IT WORKS

The Solaire Super App will contain features and platforms such as:

- Fiat On/Off Ramps
- Decentralized Exchanges
- Decentralized Messaging App
- Decentralized Social Media App
- Decentralized Games
- Yield Farms
- Wallet Integration
- Incubation Platform
- Chain Agnostic
- Inbuilt Peer to peer payment systems

FEATURES

Fiat On/Off Ramp

Solaire will allow users to access the crypto payments system (blockchain based) with ease of use.

Decentralized Exchanges

Solaire aims to incorporate existing decentralized exchanges such as Raydium, Uniswap, Pancake swap and others within its app/platform allowing users to have an easier access to DEX's.

Decentralized Messaging App

Solaire key goal is to build several features within its app, including a messaging app where users will have all of their data (messages) encrypted.

FEATURES

Decentralized Social Media App

Much like Instagram, Solaire aims to build a social media feature where users will be utilizing blockchain technology for their own social needs, earning rewards through usage.

Decentralized Games

Blockchain based games like axie infinity and gods unchained have been gaining traction over the past few months, with people from third world countries playing it as their full time job to earn income.

Yield Farms

On Solaire app, users will be able to stake their available cryptocurrencies to earn passive income off the revenue generated from the application through other means and earn additional Solaire tokens.

Users do not need to understand DeFi or staking mechanisms to do this, it will be as simple as a few taps.

FEATURES

Wallet Integration

The Solaire Wallet will be required for users to access functions through our platform.

Incubation Platform

Solaire aims to build a platform specifically for incubating blockchain and non blockchain applications within our own app.

Chain Agnostic

We plan on adding integrations with many blockchains in the crypto space such as Polkadot, Ethereum, Binance Smart Chain, and Solana.

Inbuilt Peer to peer payment systems

We plan on allowing users through any feature in our platform to be able to transact P2P transactions.

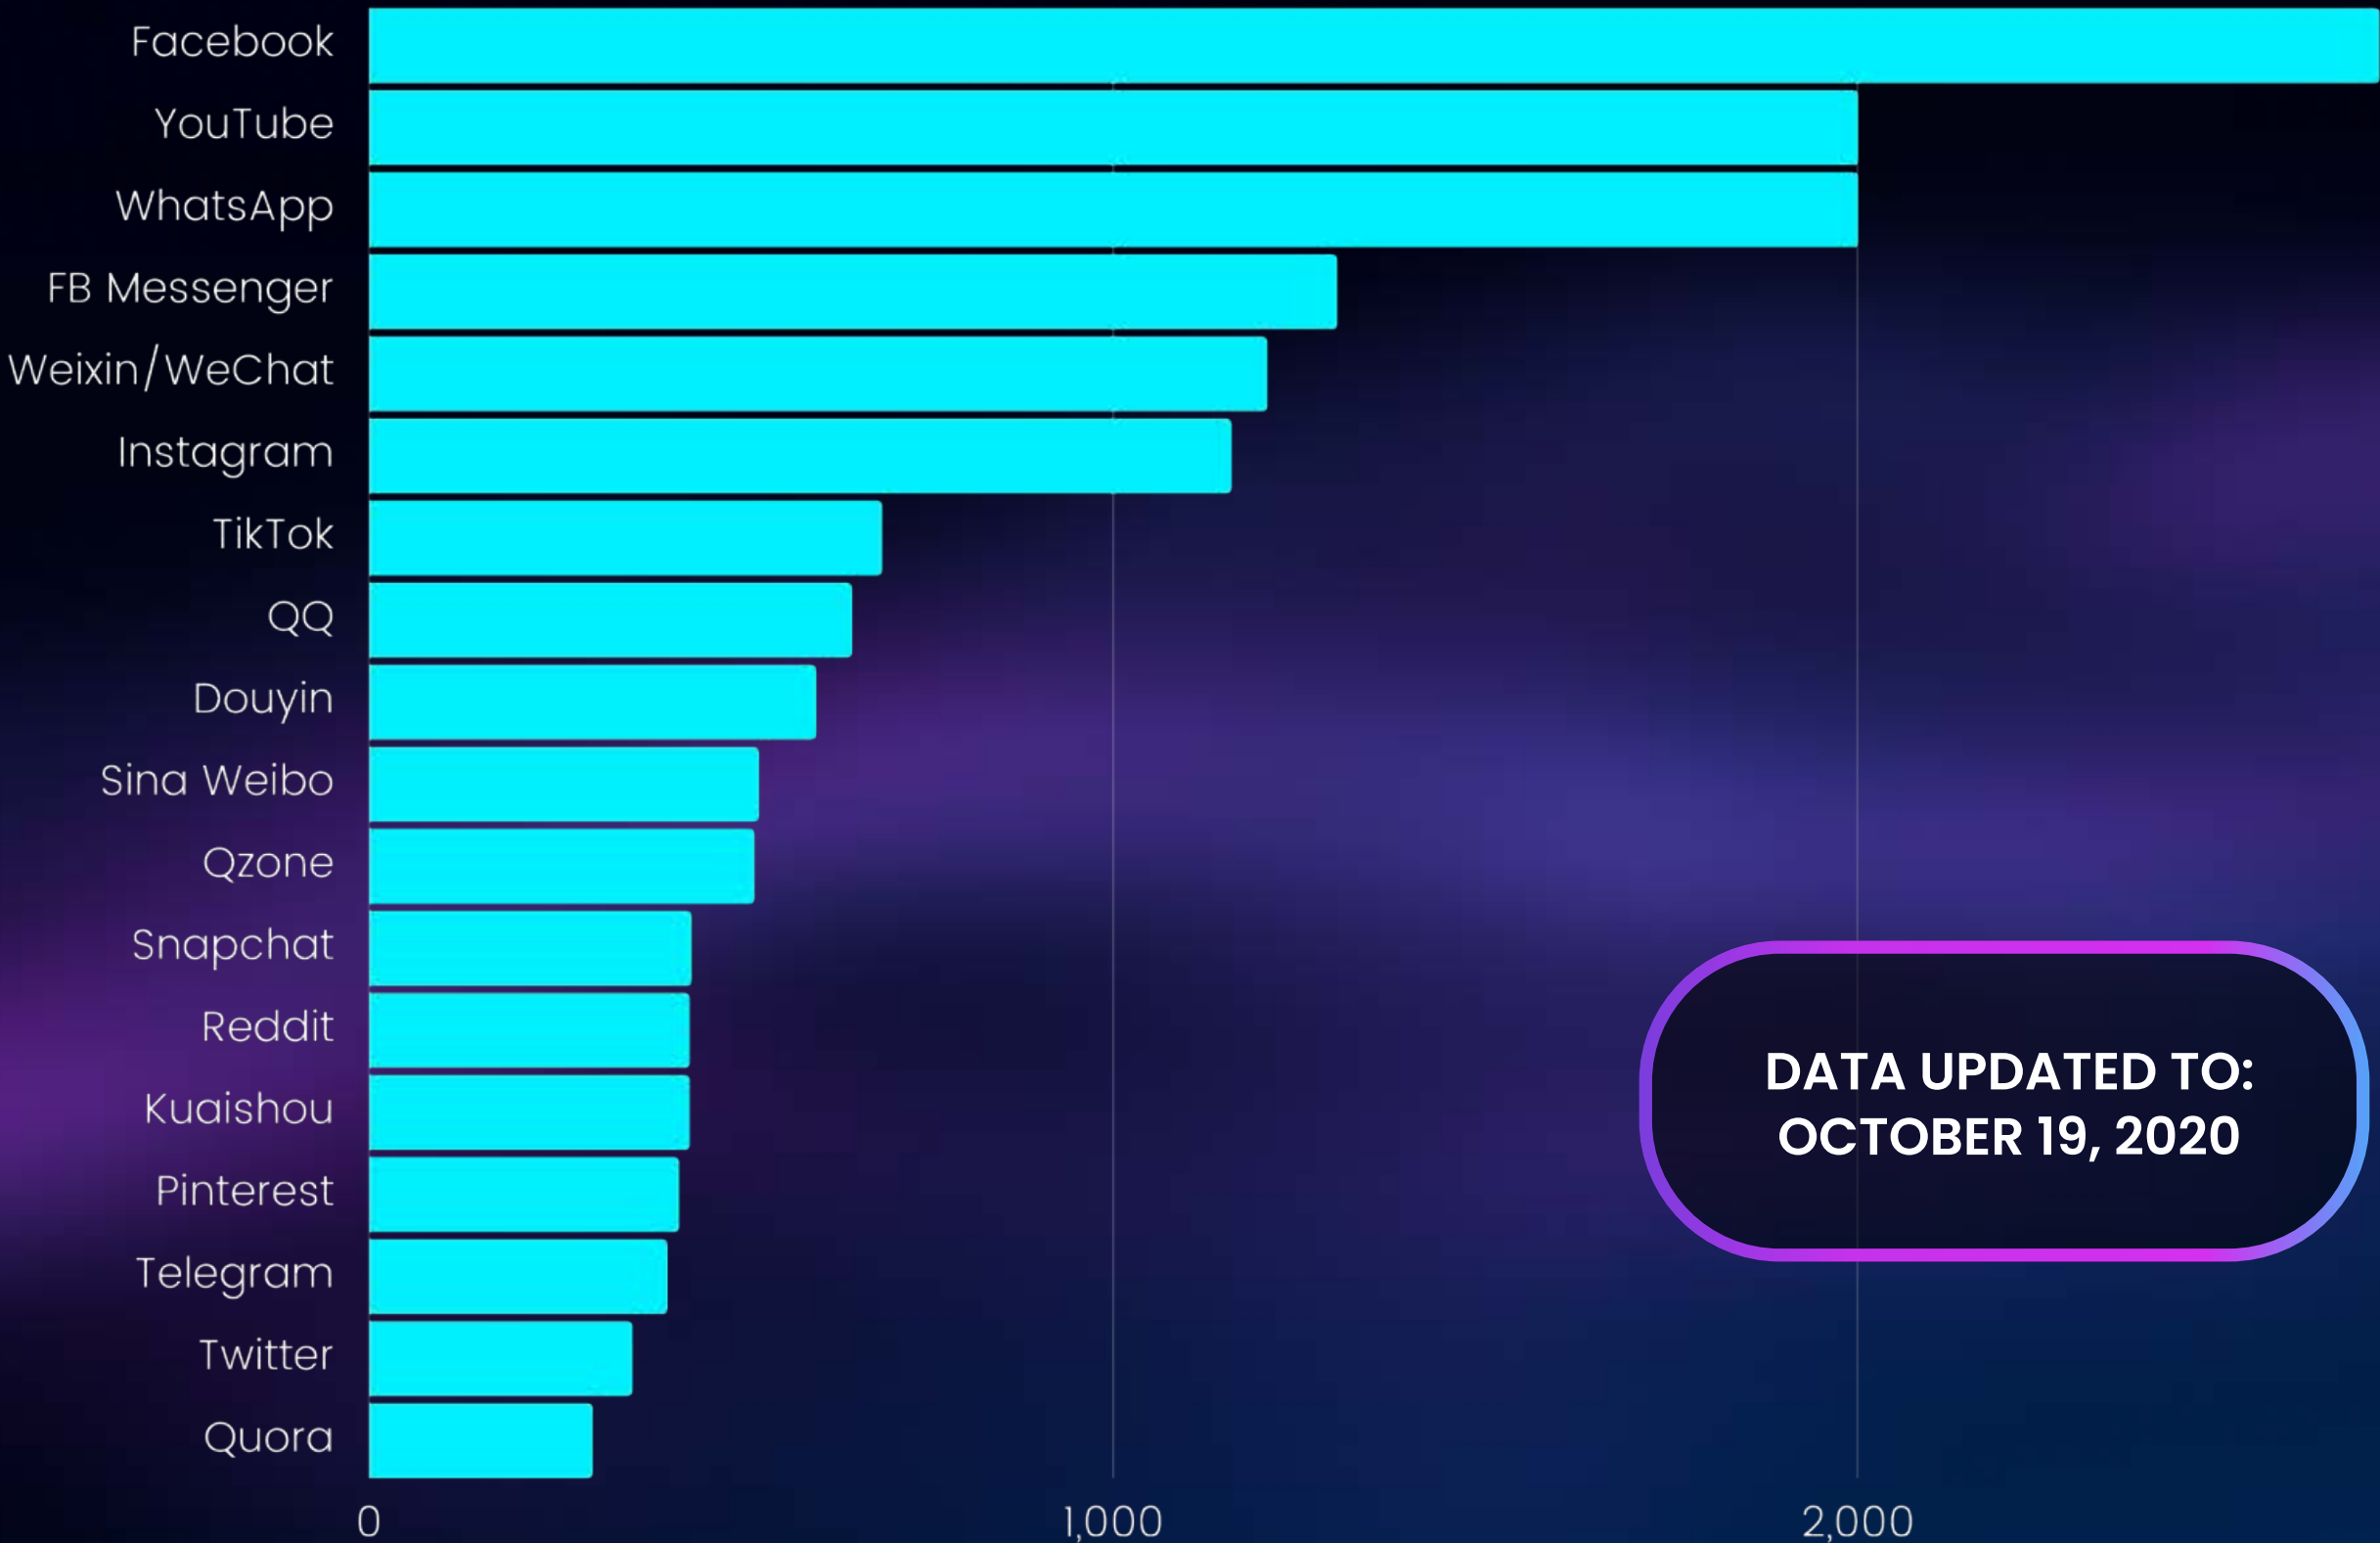

Currently, most social media apps do not provide any incentive or revenue for creators from their content. It is almost as if a waste of time and effort.

With Solaire, users will be able to mint their content as an NFT and earn a considerable amount of incentives.

The World's Most Used Social Platforms

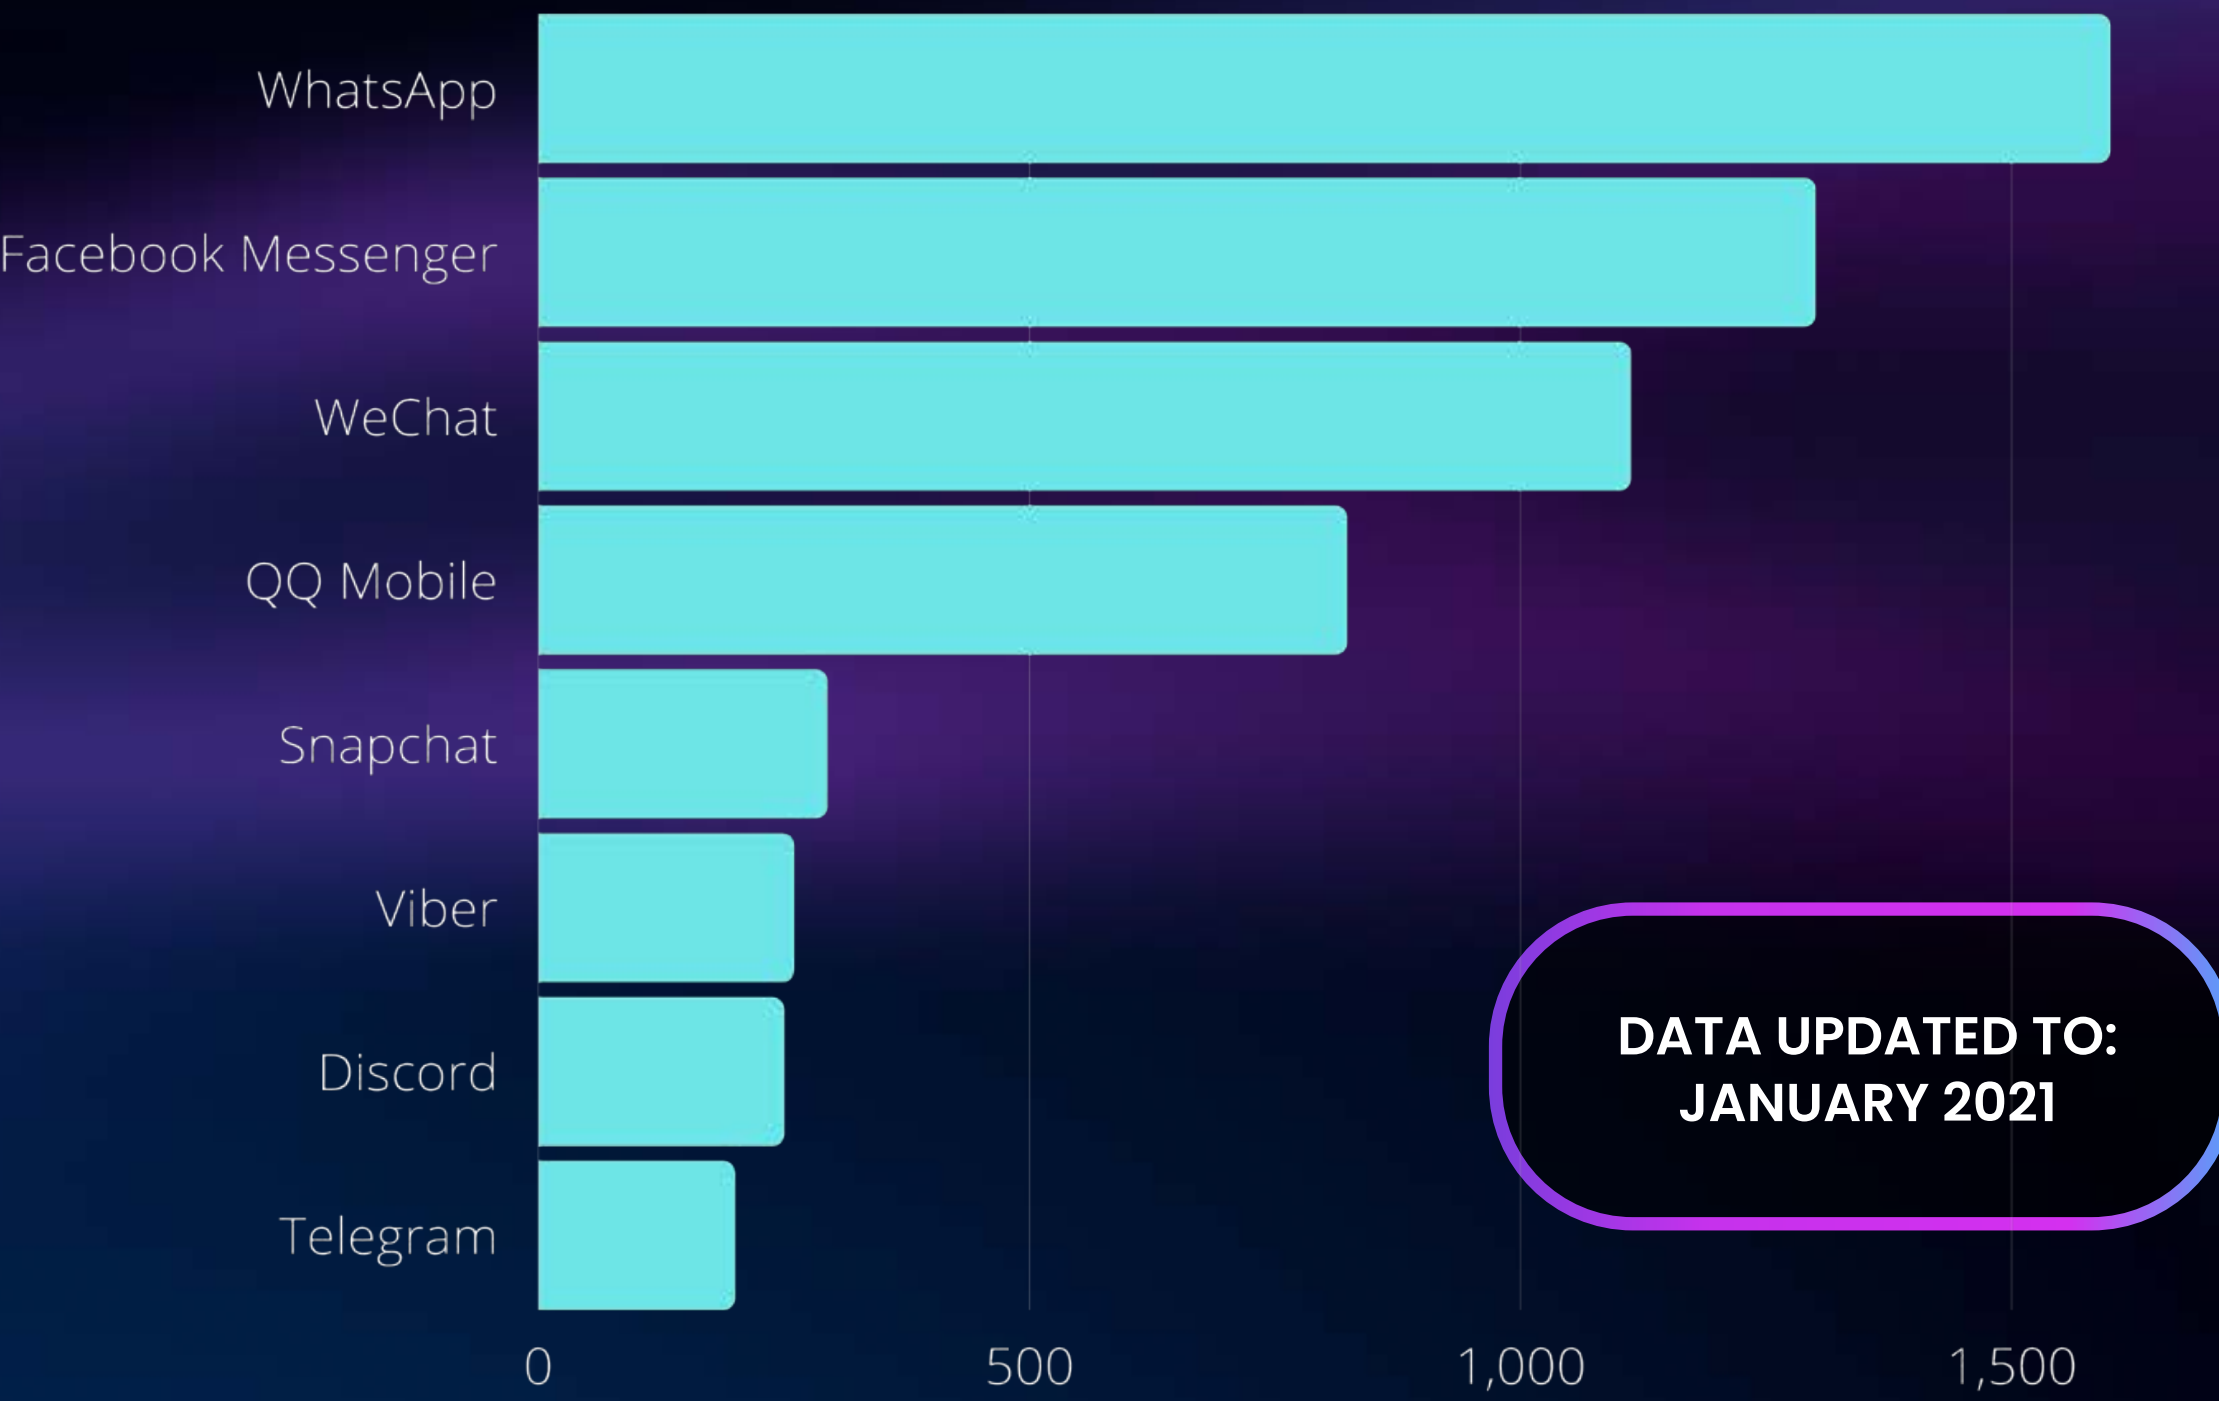

(in billions)

“Imagine yourself: yield farming, mint, and trade NFTs, chat with friends, post pictures and videos as regular posts same as on other social media apps, trading cryptos on different chains and different networks all in one app, sounds crazy, doesn't it?”

Joseph, CEO of Solaire
